                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated human nucleic acid (I) encoding any of 120 10-1533 residue amino acid sequences (S1), given in the specification, comprising any of 164 179-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists of the polypeptide of the invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. New polynucleotide encoding a polypeptide with biological activity, useful for treating a disease or disorder, e.g. osteoarthritis, burns, CNS and peripheral disease, stroke, autoimmune disorders, viral

infection, or cancer.

The invention describes a new isolated polynuclectide (I) encoding a polypeptide with biological activity comprising: a nuclectide sequence of complete that by the polypeptide with biological activity comprising: a nuclectide sequence of (I) under stringent bybridization conditions; or a nuclectide sequence of (I) under stringent bybridization conditions; or a nuclectide sequence of (I). Also described are: a(I) (expression) vector comprising (I); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polymetide in the host cell; an isolated polypeptide comprising a sequence of SEQ ID NOS: 568-1134 ([Mully defined), where the polypeptide of (S); a polymetide hybridiazing under stringent conditions with any one of SEQ ID NOS: 1-567; a composition comprising the polypeptide of (3); a method carrier; an antibody directed against the polypeptide of (3); a method of polymolectide of (1); a method for identifying a compound that binds to the polypeptide of (3); a method of polymolectides, where the collection of (3); and a collection of polymolectides, where the collection of (3); and a collection of polymolectides, where the collection of (3); and a collection of polymolectides, where the collection of (3); and a collection of polymolectides, where the collection of (3); and a collection of polymolectides, where the collection of (3); and a collection of polymolectides, where the collection of (3); and activity, which comprises any of the amino acid sequences of SEQ ID NOS: 1-567. (I) is a polymuclectide comprising of activity, which comprises any of the amino acid sequences and methods are useful in the septimination; in destriction of methods are useful for treating a disease or disorders or compessition and method are useful for treating a disease, burns, CNS and peripheral disease, allaheimer's dependent on DNA and amino acid sequences. The composition and method are useful for treating a disease, burns, CNS and peripheral disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 239; 500pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              novel polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360
                                                                                                                                                                                                                                                                                                                           The invention describes an isolated human nucleic acid (I) encoding any of 120 10-1533 residue amino acid sequences (S1), given in the specification, comprising any of 164 179-12421 base pair sequences (S2), given in the specification of 164 179-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists of the polypeptide of the innormation, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. This sequence encodes a lung specific nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                      New isolated human nucleic acid molecule and polypeptide, useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 ACTGCTAACCCCTGCCAGGCCCAGCTGCCATTCTGGGAAGAAGCATGGCCTACAG

The invention relates to a novel isolated nucleic acid molecule comprising: a sequence encoding a sequence comprising 11-1518 amino acids is a sequence comprising 190-8144 by; or a sequence that selectively hybridises to, or having at least 60% identity with the 11-1518 amino acid or 190-8144 nt sequence. The polypeptide and the nucleic acid are useful for treating breast cancer, and diagnosing or monitoring the presence of metastases of breast cancer in a patient. The polynucleotides of the invention can be used to treat disorders by gene therapy. This polynucleotide represents a breast specific related sequence of the
                                                                                                                                                                                                                                                                                                         isolated nucleic acid molecule, useful for treating breast cancer, diagnosing or monitoring the presence of metastases of breast cancer
                            BSP-agonist; BSP-antagonist; vaccine; gene therapy; cancer; breast cancer; breast specific; human; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Accadeaaccccrereseaseasecrradaccreaaseaseaseccacrereserrecre

The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polymucleotides on the probes can be used for chromosome mapping of the polymuclatide and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,

                                                                                                                                                                                                                                                                        The present sequence is one of 3351 sequences in a library of human polymucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polymucleotides. The probes can be used for chromosome mapping of the polymucleotide and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polymucleotides and their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the caringenesis pathway and/or monitor the efficacy of therappies and preventive interrentions. The polymucleotides along the antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             924

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ1779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell conference of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ12532 to AAZ17779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides any also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polynucleotides of the invention are especially used in the diagnosis, prognosis and management of colorectal cancer, breast cancer, and lung cancer. The polynucleotides can also be used to screen for peptide analogues and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel isolated human polymucleotides obtained by screening for differential expression in colon cancer, breast cancer and lugared cancer call lines. The polymucleotides of the invention are represented in AAX98275-X99118 and encode polypeptides of protein captured in AAX98275-X99118 and encode polypeptides of protein capturities (AAA), eukaryotic aspartyl proteases, GATA family of callular activities (AAA), eukaryotic aspartyl proteases, GATA family of transcription factors, G-protein alpha subunit, phorbolesters or diacylglycerol binding proteins, protein kinase, protein phosphatase 2C, cyprotein thosphatase, trypsin, wnt family of developmental signalling proteins and WWY reps/WWP domain containing proteins. The encoded polypeptides also have a functional domain selected from Ank repeat, basis region plus leucine zipper transcription factors, bromodomain. EP-hand, SH3 domain, WD domain/G-beta repeats, zinc finger (CCHC class), and zinc-binding metalloprotease domain. The polynucleotides encode polypeptides with similarity to known protein families and are predicted to have similar properties. The novel polynucleotides can be used to develop products for use as therapeutic agents and in forensic, genetic analysis, mapping and diagnostic applications. In particular, the product can be used for the detection and management of cancers. They can be used for treating e.g. cervical cancers, melanomas, colorectal adenocarcinomas, Nilm's tumour, sarcomas, cencers, melanomas, colorectal adenocarcinomas, leukemia, and any promyelocytic leukemia, monocytic leukemia, and management of cancers. They can be used for treating e.g. cervical cancers depatiary ectodermal dysplasia, of the cervix, fibrous dysplasia of the cervix, fibrous dysplasia of memary dysplasia, hyperplasias, e.g. endometrial, adrenal, breast, be all the cervix, fibrous dysplasia of the cervix, fibrous dysplasia of the cervix, epithelial or thyroid hyperplasias or pseudoepithelial adrenal, breast, brin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                859

                                                                                                                                                                                                                                                                                                                                                                                                                    of 120 10-1533 residue amino acid sequences (S1), given in the specification, comprising any of 164 179-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. This sequence encodes a lung specific nucleic acid

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ1779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell cuspected of being cancerous, where the gene product is encoded by one of the S148 polynucleotides can be used as a source of primers and probes, which can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and charactering and to detect differences in expression levels between the conded protein); and to detect differences in expression levels between two calls (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic purposes. The polymorleotides of the invention are especially used in the cancer). The polymorleotides of the invention are especially used in the diagnosis, prognosis and management of colorects, cancer, and man and management of colorects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel human genes and their expression products which are differentially expressed in different cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Randazzo F, Kennedy GC, Pot D, Kassam A;

New isolated nucleic acid for diagnosing and treating cervical cancer and for assessing and detecting compounds for treating the cancer.
                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is affilicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, ovarian cancer, identification, detection, characterisation, tumour, kinase, marker, cytostatic, antisense gene therapy, ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid for diagnosing and treating cervical cancer and for assessing and detecting compounds for treating the cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cervical cancer; cytostatic; pre-malignant condition; gene therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠે
                                                                                                                                                                                                                                                                                      ö
                                             The present invention describes a method for assessing whether a patient is afflicted with ovarian cancer by comparing: (1) the expression of a marker (1) (see ARPS9854 to ARPS98730), in a patient sample; and (2) the normal level of expression of (1) in a control non-ovarian cancer sample, where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. (1) have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used hybridoma, which produces an antibody useful for covarian cancer assessment; and (3) inhibiting ovarian cancer in a patient. AAPS98573 to AAF98593 represent human kinase marker primers and probes which are used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, leukocyte, gene expression profiling; allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, cytomegalovirus, infection, gene,
                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is affilicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising tracting and polypeptides are also useful for isolating compounds with cytostatic polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                         New peptide useful as a marker for the diagnosis of breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The system is useful for leukocyte expression profiling. It is particularly useful for diagnosing a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis or cytomegalovirus infection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; determining whether prostate cancer has metastasized in a patient; (g) assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                      Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The invention relates to mucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncancerus) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the encoded by the markers, antibodies that selectively bind to the conference of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient antisense oligonucleotide complementary to a marker of the patient antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of the marker in a patient sample and a normal level of expression of the marker in a patient sample and a normal level of expression of the expression levels indicates ovarian cancer. The level of expression of a sespense of a secreted protein or to a transcribed completed or its portion. The level of expression of the marker is a sessessed by detecting the presence in the sample, a protein or protein or protein crangement. Alternatively, the level of expression of the marker is assessed by detecting the marker, under stringent conditions. The polynucleotide which anneals with the marker or amneals with a portion of the marker is assessed by detecting the marker or amneals with a portion of the polynucleotide which anneals with the presence of a transcribed comprising the marker or amneals with a patient contained and an entire of expression of the marker is a subsequent contained and comparing the level of expression of the marker in a patient which involves detecting expression of the marker in a patient which involves detecting repeating the method at a subsequent contained and comparing the level of expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer also metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient
                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                          assessing the aggressiveness or indolence of prostate cancer in a pat i (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                   Gaps

The invention relates to nucleic acid markers which are overexpressed in cancer cells as compared to their expression in normal (i.e. noncardan cancer cells as compared to their expression in normal (i.e. noncaded by the markers, antibodies that selectively bind to the encoded by the markers, antibodies that selectively bind to the corded by the markers, antibodies that selectively bind to the corded by the markers of inhibiting ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing the level of expression of the amarker in a control non-ovarian cancer sample. A difference between the camerer corresponds to a secreted protein or to a transcribed to a secreted protein or to a transcribed corresponds to a secreted protein or to a transcribed corresponds to the marker. The level of expression of the marker corresponds to the marker. The level of expression of the assessed by detecting the presence in the sample, a protein or protein cragment corresponding to the marker. The presence of protein or protein cragment corresponding to the marker. The presence of protein or protein cragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the marker or anneals with a portion of the marker is also used for monitoring the presence of a transcribed out the polymucleotide which anneals with the marker or anneals with a portion of the marker is also used for monitoring the progression of ovarian cancer in a sample at a first point in time, repeating the method is carried out the sample at a first point in time, repeating the method is carried out sample and a first point in time, repeating the method of the marker of the printed specification, but was obtained in electronic format directly from winto int Amb/mhilahed no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
         ovarian
Novel isolated nucleic acid molecules (markers) overexpressed in ovaria cancer cells as compared to their normal non-cancerous ovarian cells ar used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ď
                                                                                                                                                                                                                                                                       The invention relates to nucleic acid markers which are overexpressed in cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides cancerous) ovarian calcs. The invention also relates to polypeptides canceded by the markers, antibodies that selectively bind to the collect opolypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient an antisense oligonuclecide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer supplementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer supplementary to a marker of the marker in a patient sample and a normal level of expression of a marker orresponds to a secreted protein or to a transcribed of compression levels indicates ovarian cancer. The level of expression of the marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the marker or anneals with the protein or protein fragment. Alternatively, the level of expression of the marker is a slow used for monitoring the marker or anneals with a polynucleotide which anneals with the marker or anneals with a polynucleotide which anneals with the marker or anneals with a subsequent time and comparing the level of expression of the marker in a patient sample at a first point in time, repeating the method is carried out time and comparing the level of expression of the marker of the printed sample. A composition comprising the method of treat ovarian cancer polynerial speciment and many ovarian is also used the invention is used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cervical cancer; cytostatic; pre-malignant condition; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75% or 90% identity (c) (a); or (f) degenerate variants of (a). Polypeptides (ABP68595-C) ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and propertides and proteins in the tumour colls, in vaccines and for gene colls exapt. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly content of the two the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acid molecules (markers) overexpressed in ovarian

                                                                                                                                                                     New isolated nucleic acid for diagnosing and treating cervical cancer and for assessing and detecting compounds for treating the cancer.
                                                                                                                                                                                                                                                              The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient, and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide and pancreatic tumor polypeptides, useful f

cancerous) ovarian cells as compared to their expression in normal (i.e. noncarcerous) ovarian cells. The invention also relates to polypeptides cancerous) ovarian cells. The invention also relates to polypeptides corcesponding to a marker antibodies that selectively bind to the corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a complement corresponds to a secreted protein or to a transcribed polymucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein cragment corresponding to the marker. The presence of protein or protein cragment is detected using an antibody that specifically binds with the protein or protein cragment. Alternatively, the level of expression of the marker is a sessessed by detecting the presence of a transcribed comprising the marker or anneals with a portion of the polymucleotide comprising the marker, under stringent conditions. The patient which involves deferent in a pration of the marker in a pration of the patient which involves deference the marker in a pration of the polymucleotide comprising the marker, under stringent conditions. The patient which involves deference the marker in a pration of the patient which involves deference the marker in a protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form at directly the printed specification, but was obtained in electronic format directly

                                                                                                                                             The invention describes a breast specific nucleic acid. The nucleic acids, polypeptides, antibodies, agonists and antagonists, and compositions comprising them are useful for identifying, diagnosing, monitoring, staging, imaging, and treating breast cancer and noncancerous disease states in breast tissue, in gene therapy, vaccine development, in producing transpenic animals and cells, and in producing engineered breast tissue for treatment and research. The nucleic acids may be used as molecular markers for detecting breast cancer for accurate staging of the disease and monitoring the progress of cancer treatments, and as hybridisation probes or primers. This sequence encodes a breast specific protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleotide sequence (SI). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention. The activity of the polypeptide of the invention as exptostatic. The antibody is useful for electection perfectly in the detection of breast tumours. (I) is useful an invention are useful in the detection of breast tumours. (I) is useful an arker for breast cancer and in breast cancer therapy. Sequences given
                                                        cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated polypeptide associated with breast cancer, useful for detecting presence of polypeptide in sample, as a marker for breast

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel method for monitoring differential expression of genes in a filamentous fungal cell. Specifically, it refers to identifying differential gene expression occurring between two related filamentous fungal cells and comprises adding detection reporter labeled nucleic acids of filamentous fungal cells to a substrate array of trichoderma resea; (T. resea;) expressed sequenced tagg (ESPs), or suppression subtractive hybridization (SSH) clones and detecting a signal in the array. The present invention further describes a computer readable of the array. The present invention further describes a computer readable of in the array. The present invention further describes a computer readable of in the array. The present invention further describes a computer readable of the first filamentous fungal cells. It also provides a search in one or more second filamentous fungal cells. It also provides a search of the comparing a target sequence (s). Accordingly, it provides a contifer sequence (s). Accordingly, it provides a computer conting the homologous sequence(s). Accordingly, it provides a microorganism is grown on cellulose or corn stover, as well as for discovering new genes, identifying possible functions of unknown open cending frames and monitoring gene copy number variation and stability.

Note that this method utilizes an array where one spot equals one gene or open reading frame, which makes extensive follow-up characterization con unnecessary since sequence information is available and EST and/or SSH
                                                                                                                                                                                                       ö
in records ACN78851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T_reesei suppressive subtractive hybridization (SSH) cDNA clone Seq 1051.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Monitoring differential expression of genes of two filamentous fungal cells, for e.g. discovering new genes, comprises adding labeled nucleic acids to an array of Trichoderma reesei expressed sequenced tags and

```
The invention relates to an isolated polymucleotide which encodes an immune related protein or a protein exhibiting biological properties of an immune-related protein as sequence selected from 26 sequences. The expression vector and reagent are useful for the preparation of a capture such as allergic, autoimmune, inflammancry or infectious diseases, such as allergic, autoimmune, inflammancry or infectious diseases, e.g. asthma, allergic rhinitis, atopic dermatitis, hives, conjunctivitis, systemic lupus erythematosus, myasthenia gravis, sepsis, sepsis, gout, or colitis. The polypeptides may at the encine of activity, as a bait protein in a two-hybrid or three-hybrid assay to identify other proteins which bind to or interact with the human immune-related protein and modulate its activity, and for immunisation of mammals. The polynucleotides of the invention can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
microarrays can be organized based on function of the gene products. This polymuclectide sequence is a T. reses! SSH cDNA clone that forms part of the substrate array of the invention. NOTE: The SeqIDS 1-1188 referring to T. reses! ESTs or SSH clones or their combinations are available in electronic form from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antiallergic; antiinflammatory; antiasthmatic; dermatological; ophthalmological; immunosuppressive; immune related; allergic; autoimmune; inflammatory; infectious disease; asthma; allergic rhinitis; atopic dermatitis; hives; conjunctivitis; systemic lupus erythematosus; myasthenia gravis; psoriasis; sepsis; gout; colitis; immunisation; gene therapy; mouse; murine; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient affilicted with ovarian cancer comprising providing to cells of the patient an antisense oligomucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the
be used in gene therapy for treating disorders. This sequence represents an immune-related mouse protein of the invention. This polynucleotide represents an immune-related mouse DNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       invention relates to nucleic acid markers which are overexpressed in

                 the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method at a subsequent using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted

                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                           marker corresponds to a secreted protein or to a transcribed polymuclectide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polymucleotide which anneals with the marker or anneals with a portion of the polymucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out
                                                                                                                                                                                                                                                                      using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
with ovarian cancer, which involves comparing the level of expression of an arxier in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to nucleic acid markers which are overexpressed in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncancerus) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the concernus) ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of trating a patient antisense oligonuclectide complementary to a marker of the patient an antisense oligonuclectide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of the cancer in a patient sample and a normal level of expression of the marker in a patient sample and a normal level of expression of the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed comparing to the marker. The presence of protein or protein cancer is assessed by detecting the presence in the sample, a protein or protein or protein or protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed comprised by detecting the presence of a transcribed protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed collecting the presence of a transcribed collecting the progression of the marker in a portion of the marker. In a portion of the marker in a signal with the marker, under stringent conditions. In a marker in a portion of the marker in a signal with the marker in a portion of the marker in a portion of the marker in a parting the progression of the marker in a portion of the marker in a paint of expression of the marker in a portion of the marker in a paint of expression of the marker in a paint of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                        Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncancer) ovarian cancer cells as compared to their expression in normal (i.e. noncancer) ovarian cells. The invention also relates to polypeptides cancerous) ovarian cancer inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention. The patient and antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a control non-ovarian cancer. The level of expression of the carpression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed cassessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed corresponding to the marker. The presence of a transcribed corresponding to the marker. The presence of a transcribed corresponding to the marker is approximent in a patient which anneals with the marker or anneals with a portion of the marker is also used for monitoring the presence or anneals with a portion of patient which involves detecting expression of the marker in a patient or protein in the sample at a first point in time, repeating the method at a subsequent corresponds the level of expression of covarian cancer in a patient wing an ovarian tissue sample. A composition comprising a marker, or mainsonder and an enable of the marker is also used for monitoring the reserved or time and comparing the level of expression of constitution or time and comparing the invention is used to retar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

covarian caneer cells as compared to their expression in normal (i.e. non-
covarian caneer cells as compared to their expression in normal (i.e. non-
cancerous) ovarian cells. The invention also relates to polypeptides
encoded by the markers, antibodies that selectively bind to the
corded by the markers, antibodies that selectively bind to the
encoded by the markers, antibodies that selectively bind to the
corresponding ovarian cancer involving inhibiting expression of a gene
corresponding to a marker of the invention and a method of treating a
corresponding to a marker of the invention and a method of treating a
corresponding to a marker of the invention and a method of treating a
marker in a patient sample and a normal level of expression of the
a marker in a patient sample and a normal level of expression of the
corresponds to a secreted protein or to a transcribed
polynuclectide or its portion. The level of expression of the arker in a patient and an earker. The presence of protein or protein
fragment corresponding to the marker. The presence of protein or protein
fragment corresponding to the marker. The presence of a transcribed
polynuclectide or its portion. The level of expression of the arker is a sessessed by detecting the presence of a transcribed
polynuclectide which anneals with the marker or anneals with a portion of
the polynuclectide which anneals with the marker or anneals with a potion of
the polynuclectide which anneals with the marker or anneals with a potion of
the polynuclectide which anneals with the marker or anneals with a protein or patient
sample at a first point in time, repeating the method at a subsequent
cusing an ovarian tissue sample. A composition comprising a marker,
companing the level of expression of the marker of the
sample or antibody of the invention is used to treat ovarian cancer.
This sequence represents a human ovarian cancer DNA marker or the printed appendication, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to nucleic acid markers which are overexpressed in
                        Human; ovarian cancer; ds; tumour; cytostatic; DNA marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Seguence 310 BP; 72 A; 54 C; 66 G; 118 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the printed specification, but was obtained in electro
from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides cancerous) ovarian cells. The invention also relates to polypeptides canced by the markers, antibodies that selectively bind to the canced by the markers, antibodies that selectively bind to the parient of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient an antisense oligonuclecide complementary to a marker of the invention. The markers are useful for assessing the level of expression of the amarker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the carrier portion or ovarian cancer ample. A difference between the marker corresponds to a secreted protein or to a transcribed of polynuclectide or its portion. The level of expression of the marker corresponds to a secreted protein or to a transcribed polynuclectide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein cragment corresponding to the marker. The presence of protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the marker or anneals with a portion of polynuclectide comprising the marker or anneals with a portion of the polynuclectide comprising the marker or anneals with a patient colynuclectide which anneals with the marker or anneals with a patient content which involves detecting the progression of the marker in a patient consider a first point in time, repeating the method is carried out time and comparing the level of expression. The method is carried out cuing an ovarian tissue sample. A composition cancer in a patient detected the invention is need to treat ovarian cancer. This sequence represents a human ovarian cancer plant and an a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                           Human; ovarian cancer; ds; tumour; cytostatic; DNA marker.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to nucleic acid markers which are overexpressed in cancer cells as compared to their expression in normal (i.e. noncancatus) ovarian cells. The invention also relates to polypeptides cancerous) ovarian cancer antibodies that electively bind to the necoded by the markers, antibodies that electively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for agessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the marker in a patient sample and a normal level of expression of a marker in a patient sample and a normal level of expression of a marker or sepands to a secreted protein or to a transcribed carresponds to a secreted protein or to a transcribed corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that sepacifically binds with the protein or protein fragment. A detecting the presence of a transcribed the marker is assessed by detecting the presence of a transcribed the marker is assessed by detecting the presence of a transcribed the marker is assessed by detecting the presence of a transcribed the marker is assessed by detecting the presence of a transcribed the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed the protein or protein fragment. Alternatively, the level of expression of the marker is an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is an antibody that specifically binds with the protein or protein and the marker is a passence of a transcribed or the marker is a passence 
                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.

```
polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method at a subsequent using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-acacerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antiense oligonuclectide complementary to a marker of the invention. The markers of involves comparing the lavel of expression of a marker in a patient sample and a normal level of expression of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ·

marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein or fragment is detected using an antibody that specifically binds with the fragment or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, mile and ovarian tissue sample. A composition of the marker in a patient which involves detecting expression. The method is carried out using an ovarian tissue sample. A composition comparising an earker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

concoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense objected complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of the marker in a patient sample and a normal level of expression of the capters ovarian cancer. The level of expression of a marker oversponds to a secreted protein or to a transcribed expression bevels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed corresponding to the marker. The presence of protein or protein fragment corresponding to the marker. The presence of protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed or the pulynucleotide which anneals with the marker or anneals with a portion of the polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide which anneals with the marker or anneals with a patient or marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient or sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression of the marker is also used for monitoring the pressure or the proprising a marker. The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from the propriet or first point in the sequence date for this patent did not form part of the printed specification, but and a s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

```
covarian cancer cells as compared to their expression in normal (i.e. noncerous) ovarian cells. The invention also relates to polypeptides encoded by the marker, antibodies that selectively bind to the cenceded by the marker, antibodies that selectively bind to the cenced by the marker of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprishing providing to cells of the patient an antisense oligomuclectide complementary to a marker of the invention. The marker is a patient sample and a normal level of expression of the arker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of the carrier corresponding to the level of expression of the carrier corresponding to the marker. The presence of protein or protein fragment corresponding to the marker. The presence of protein or protein fragment. Alternatively, the level of expression of the protein or protein fragment. Alternatively, the level of expression of the polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide of or monitoring the presence of a transcribed or marker is assessed by detecting the presence of a transcribed or marker is assessed by detecting the marker or anneals with a pottion of the polynucleotide which anneals with the marker or anneals with a pottion of the polynucleotide comprising the marker or anneals with a patient or protein that the level of expression of the marker in a patient which involves detecting the presence of a transcribed or antibody of the invention. The method is carried out time and comparing the level of expression or the printed specification, but was obtained in all and or form part 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cervical cancer; cytostatic; pre-malignant condition; gene therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                  ABQ563106 to ABQ60787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB79004 represent proteins encoded by the ABQ60775 to ABQ60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of colon cancer in a patient. (I) is useful for determining the presence of colon cancer in a cell or tissue type, for determining the presence of state of other type of cancer, in antisense therapy, to generate acrossors on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to nucleic acid markers which are overexpressed in
      tissues useful for determining the presence of colon cancer in a cell tissue type, and in antisense therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                           ö
                                                New isolated nucleic acid for diagnosing and treating cervical cancer and for assessing and detecting compounds for treating the cancer.
                                                                                                                      cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient, and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be
                                                                                                           genes (AAH68727-AAH73383) associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and
                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptide useful as a marker for the diagnosis of breast cancer.
                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-mailgnant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient, and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                         Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; 88.
                                                                                                                                                                                                                                                                                                                                                                          Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancercuus) ovarian calls. The invention also relates to polypeptides cancercuus) ovarian calls. The invention also relates to polypeptides cancercuus) ovarian cancer intibodies that selectively bind to the at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves complementary to a marker of the patient an antisense oligonuclectide complementary to a marker of the patient an apatient sample and a normal level of expression of a marker in a patient sample and a normal level of expression of expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynuclectide or its portion. The level of expression of the marker corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the from the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed comparising the marker, under stringent conditions. The marker is as suesded for monitoring the presence of a transcribed comparising the level of expression of the marker in a patient correct in a patient which involves detecting the presence of a transcribed comparising the level of expression of the marker is a subsequent correction of the marker is a subsequent correction of the marker or anneals with a pocifically binds and comparish the level of expression of the marker is a subsequent correction of the marker is a bound for marker in a patient which involves detecting the presence of a transcribed or marker is also used for monitori
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncancerus) ovarian calls. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the encoded by the markers, antibodies that selectively bind to the encoded by the markers, antibodies that selectively bind to the at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a the patient afflicted with ovarian cancer comparising providing to cells of the patient an antiense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer useful for assessing if a patient the afflicted with ovarian cancer sample. A difference between the carrier or a patient sample and a normal level of expression of the marker in a control non-ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed cor its portion. The level of expression of a sessessed by detecting the presence in the sample, a protein or protein corresponding to the marker. The presence of protein or protein corresponding to the marker. The presence of protein or protein corresponding to the marker. The presence of protein or protein corresponding the marker is specifically binds with the marker protein or protein protein or protein or protein protein or protein or protein the marker is assessed by detecting the marker or anneals with a portion of the protein or protein or protein or protein the marker or anneals with a portion of the protein or protein or protein the corresponding the presence of a transcribed or the presence of a transcribed or the presence of a transcribed or the presence of a transcribed or the presence of a transcribed or the presence of a transcribed or the presence of a transcribed or the presence of a transcribed or the presence of a tra
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the polymucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; ovarian cancer; ds; tumour; cytostatic; DNA marker.

```
The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer comparing the level of expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncarcaus) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian involves comparing the level of expression of marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the

consider corresponds to a secreted protein or to a transcribed polymucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein or protein or protein or protein or protein or protein or protein or protein or protein or protein fragment. Alternatively, the level of expression of protein or protein fragment. Alternatively, the level of expression of marker is assessed by detecting the presence of a transcribed polymucleotide which anneals with the marker or anneals with a portion of the polymucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method at subsequent using an ovarian tissue sample. A composition comprising a marker, colling and ovarian tissue sample. A composition comprising a marker. This sequence represents a human ovarian cancer DNA marker of the

progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has mecastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer comparing the level of expression of a marker in a patient sample and a normal level of expression of marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecules (markers) overexpressed in ovarian

```
cc marker corresponds to a secreted protein or to a transcribed
cc polynucleotide or its portion. The level of expression of the marker is
cc sasessed by detecting the presence in the sample, a protein or protein
c fragment corresponding to the marker. The presence of protein or protein
cc fragment is detected using an antibody that specifically binds with the
cc protein or protein fragment. Alternatively, the level of expression of
the marker is assessed by detecting the presence of a transcribed
cc the polynucleotide comprising the marker or anneals with a portion of
cm polynucleotide comprising the marker under stringent conditions. The
cc marker is also used for monitoring the progression of ovarian cancer in a
cc patient which involves detecting expression of the marker in a patient
cc sample at a first point in time, repeating the method at a subsequent
cc time and comparing the level of expression. The method is carried out
cusing an ovarian tissue sample. A composition comprising a marker,
cc polypeptide or antibody of the invention is used to treat ovarian cancer.
cc This sequence represents a human ovarian cancer DNA marker of the
contribution. Note: The sequence data for this patent did not form part of
c from with a fre wind int was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

coroded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk cof developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient antisense oligonuclectide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of the invention. The patient is apatient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or transcribed polynuclectide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polynuclectide which anneals with the marker or anneals with a portion of the polynuclectide comprising the marker, under stringent conditions. The patient which involves detecting expression of the marker in a patient cancer in a patient sample at a first point in time, respecting the method at a subsequent cancer in a contain and comparing the level of expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncarrian cancer cells as compared to their expression in normal (i.e. noncancerus) ovarian cells. The invention also relates to polypeptides cancerous) ovarian cancer intibodies that selectively bind to the encoded by the markers and inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a captient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the captession levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed complement is detected using the presence in the sample, a protein or protein fragment or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment is assessed by detecting the presence of a transcribed content or protein fragment is assessed by detecting the presence of a transcribed content or protein fragment is assessed by detecting the presence of a transcribed content or protein fragment is assessed by detecting the presence of a transcribed content or protein fragment is assessed by detecting the marker or anneals with a portion of the polymucleotide which anneals with the marker is a second for monitoring the presence or anneals with a portion of marker is a let used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncancrous) ovarian cells. The invention also relates to polypeptides cancerous) ovarian cancer antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide companiementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer sample. A difference between the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of marker corresponds to a secreted protein or a transcribed marker in a solution. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment is detected using an antibody that sample, a protein or protein fragment is assessed by detecting the presence of a transcribed the marker is assessed by detecting the presence of a transcribed the marker is assessed by detecting the presence of grotein or protein or protein an antibody that specifically binds with the protein or protein assessed by detecting the presence of a transcribed the marker is assessed by detecting the presence of the marker is assessed by detecting the presence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polymiclectide which and with the marker or anneals with a portion of the polymiclectide which and with the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method at subsequent using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 16375; 106pp; English.

```
The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer comparing the level of expression of a marker in a patient sample and a normal level of expression of the invention. The marker in a patient sample and a normal level of expression of a marker in a patient sample and a normal level of expression of the marker in a patient sample and a normal level of expression of a compared or secreted protein or to a transcribed polymucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment or protein fragment. Alternatively, the level of expression of the protein or protein fragment. Alternatively, the level of expression of the polymucleotide doming to the marker. The presence of a transcribed polymucleotide which anneals with the marker of a subsequent conditions. The marker is also used for monitoring the presence of a transcribed of the marker is also used for monitoring the presence of a transcribed of marker is also used for monitoring expression of the marker is a subsequent tissue sample. A composition comparising a marker of this an ovarian cancer in a patient which involves detecting expression. The method at a subsequent using an ovarian tissue sample. A composition comparising a marker of the invention is used to transcribed out invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5; Length 392;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Indels

```

The intention retailed as compared to their expression in normal (i.e. noncancerous) ovarian cells. The invention also relates to polypeptides
cancerous) ovarian cells. The invention also relates to polypeptides
canceded by the markers, antibodies that selectively bind to the
polypeptides, a method of inhibiting ovarian cancer in a patient at risk
of developing ovarian cancer involving inhibiting expression of a gene
corresponding to a marker of the invention and a method of treating a
patient afflicted with ovarian cancer comprising providing to calls of
the patient an antisense oligonuclectide complementary to a marker of the
invention. The markers are useful for assessing if a patient is afflicted
with ovarian cancer, which involves comparing the level of expression of
a marker in a control non-ovarian cancer. The level of expression of the
marker corresponds to a secreted protein or to a transcribed
control non-ovarian cancer. The level of expression of a
marker corresponds to a secreted protein or to a transcribed
control or its portion. The level of expression of the marker is
assessed by detecting the presence in the sample, a protein or protein
fragment corresponding to the marker. The presence of protein or protein
corresponding to the marker. The presence of protein or protein
corresponding to the marker, the presence of expression of the
protein or protein fragment. Alternatively, the level of expression of
the marker is assessed by detecting the presence of a transcribed
corresponding to the marker is positically binds with the
protein or protein fragment. Alternatively, the level of expression of
the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent using an ovarian tissue sample. A composition comprising a marker, bolypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. The invention relates to nucleic acid markers which are overexpressed in
